

Biometrics: Bodies, Technologies, Biopolitics (Routledge Studies in Science, Technology and Society)

Biometric technologies, such as finger- or facial-scan, are being deployed across a variety of social contexts in order to facilitate and guarantee identity verification and authentication. In the post-9/11 world, biometric technologies have experienced an extraordinary period of growth as concerns about security and screening have increased. This book analyses biometric systems in terms of the application of biopolitical power corporate, military and governmental on the human body. It deploys cultural theory in examining the manner in which biometric technologies constitute the body as a target of surveillance and as a data-information object. The book thereby provides a comprehensive overview and critical analysis of both the local and global ramifications of biometric technologies.
